

2021 Ford Mustang Mach-E

► Built from all the passion of its iconic heritage, Mustang Mach-E is the new all-electric crossover. Get ready for 0-60 thrills, expansive range, zero vehicle emissions and more from the 2021 North American Utility Vehicle of the Year.

The Mustang Mach-E GT model offers pure torque-drenched exhilaration with a performance-inspired design. With 480 horsepower and 600 lb.-ft. of torque, this pony earns every inch of its GT badge. An upgrade to the GT Performance Edition let's the driver achieve 0-60 mph in 3.5 seconds and 634 lb.-ft. of torque.

Additional features for this Mustang Mach-E include SYNC® 4A with enhanced voice recognition and connected navigation

and entertainment system with AM/FM stereo, B&O Sound System by Bang & Olufsen (nine speakers plus subwoofer), media bin, MP3 capability, speed-compensated volume and SiriusXM with 360L.

The interior is futuristic with design and materials to demonstrate the unique thinking behind the experience for passengers. The uber-comfortable Active™ Seating Material with Miko® Inserts and Copper Metallic Accents look great but feel even better. They hug occupants as corners and torque take effect. The liftgate is hands-free and foot-activated for ease of use.

The exterior is something to revel in. While it is hardly similar to the famed Mustang body enthusiasts are accustomed to, it features some iconic curves and features. The 20-inch machined-face aluminum with high gloss black-painted pockets and aero cover on the GT model makes one question if this is a sports car or a crossover SUV. Each model replaces the usual engine space under the hood with a front trunk for additional space. The illuminated Front Pony Badge is a standard feature on the GT model as well. ■ —**Mike Hunter**

2021 FORD MUSTANG MACH-E

MSRP: \$42,895

EPA Estimated Range: 250-305 miles

0-60: 3.5 sec.

Cooling Gadget for Hot Summer Workplace Safety

A report in Yale Climate Connections indicates that, according to NCEI's annual temperature outlook, "the year 2021 is 96% likely to rank among the 10 warmest years on record and 85% likely to rank among the eight warmest years on record" and the CDC tells us there are more than 600 deaths attributed to extreme heat conditions in the United States every year.

Potentially of interest for OSHA-minded businesses and professionals seeking out those heat-busting solutions that can keep outdoor workers calm, cool and collected as the mercury rises is a gadget now entering the market: the Chiller Body Freezing Gel Pad for Headwear. This custom freezing gel pad insert tucks invisibly inside most headwear. It's an easy way to ward off heat exhaustion and stress to stay comfortable, healthy and productive at work (and at play during off hours).

The Chiller Body cooling gel insert proffers a dual-sided cooling experience. Use the "Cool Chill" side for a soft fabric feel and gentle

cooling experience or flip it over and use the "Extreme Chill" side for a much higher cooling intensity. Reusable and easy to put in place and remove, this hat insert is comfortable, lightweight and flexible so it molds to any head shape and size. Plus, it's sealed so it isn't damp or wet, which can lead to bacteria and malodors, and it allows for maximum air flow to prolong the cooling experience. Sold as a 2-pack, one insert can be worn while the other is being re-cooled for an all-day cooling experience. —**Merilee A. Kern, MBA, Forbes Business Council member and founder, executive editor and producer of "The Luxe List" as well as host of the nationally syndicated "Savvy Living" TV show**
