The GermAwayUV Table Top UVC Room Sterilizer is a portable and remote-controlled UVC room sterilizer that purifies air and disinfects surfaces in under one hour. This 55-watt UV lamp is suitable for the sterilization and disinfection of nearly all indoor spaces. It's proven to kill up to 99 per cent of viruses, bacteria, mould and other harmful micro-organisms, and eradicate odors, through the use of natural Ultraviolet UV-C light. Use it anywhere, from offices, classrooms/daycare facilities, warehouses, clinics, hospitals, public bathrooms, break rooms and anywhere else germs and odours are sure to lurk. It's extremely easy to use — just plug it in, place in the middle of the room to be sterilized and leave the area. The device turns on via an infrared remote control or its on-board timer setting. By delaying 30 seconds to start, the lamp assures user safety. In minutes kill up to 99 per cent of harmful pathogens and eliminate odours.
